TEXT & IMAGES

- Images can easily be added to your webpage. You can code an images location, size, etc on the page. Here are some examples of ways to code them onto the page.

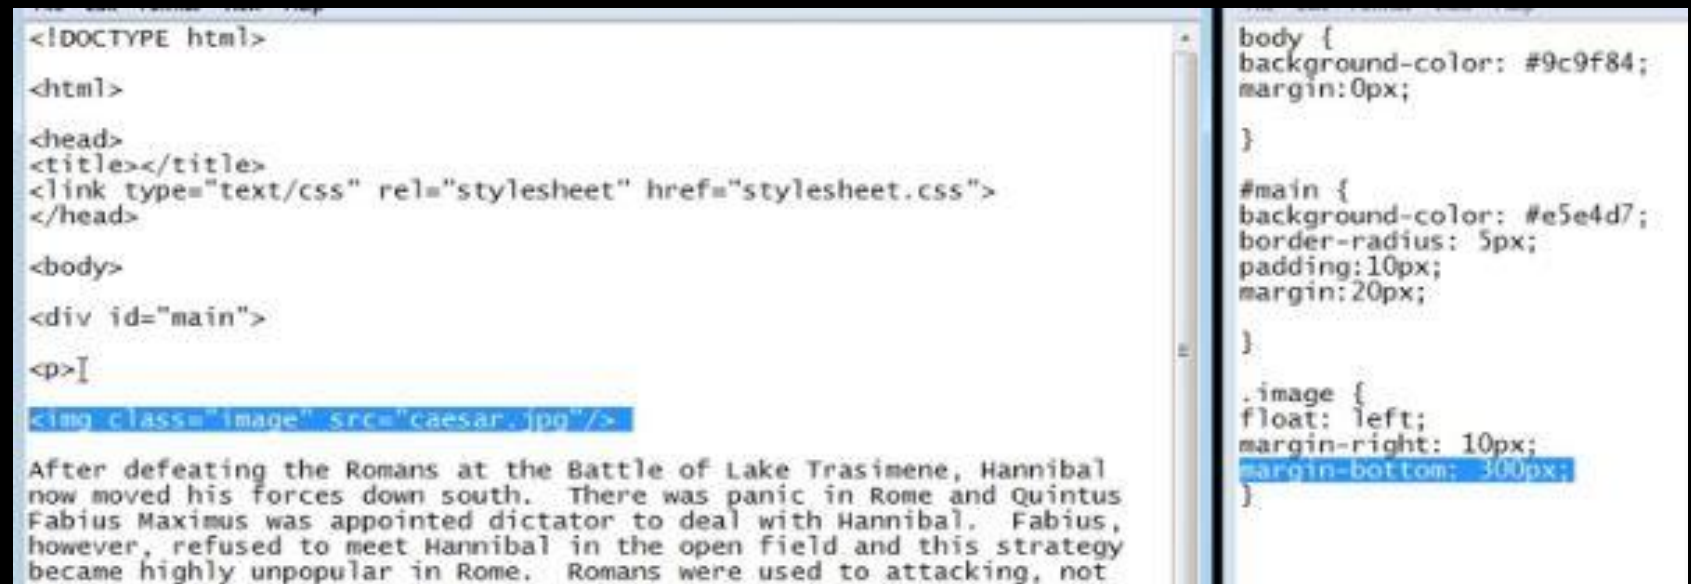

Resize

```
img {  
  max-width: 100%;  
  height: auto;  
}
```

Center

```
img {  
  display: block;  
  margin-left: auto;  
  margin-right: auto;  
  width: 50%;  
}
```

Text & Images

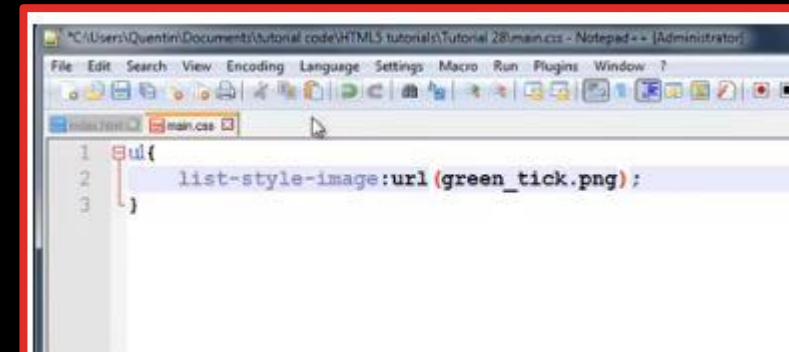

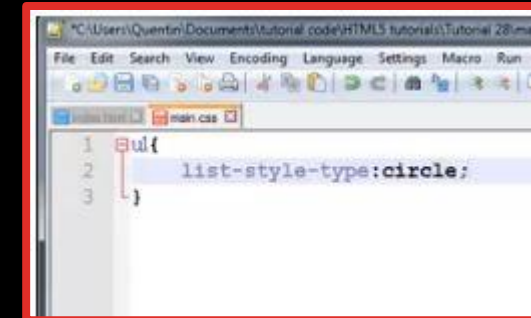

LIST-STYLE

- In HTML, there are two main types of lists:
- unordered lists () - the list items are marked with bullets
- ordered lists () - the list items are marked with numbers or letters

The CSS list properties allow you to:

- Set different list item markers for ordered lists
- Set different list item markers for unordered lists
- Set an image as the list item marker
- Add background colors to lists and list items

TEXT-ALIGN

- The text-align property is used to set the horizontal alignment of a text.
- A text can be left or right aligned, centered, or justified.
- The following example shows center aligned, and left and right aligned text (left alignment is default if text direction is left-to-right, and right alignment is default if text direction is right-to-left):

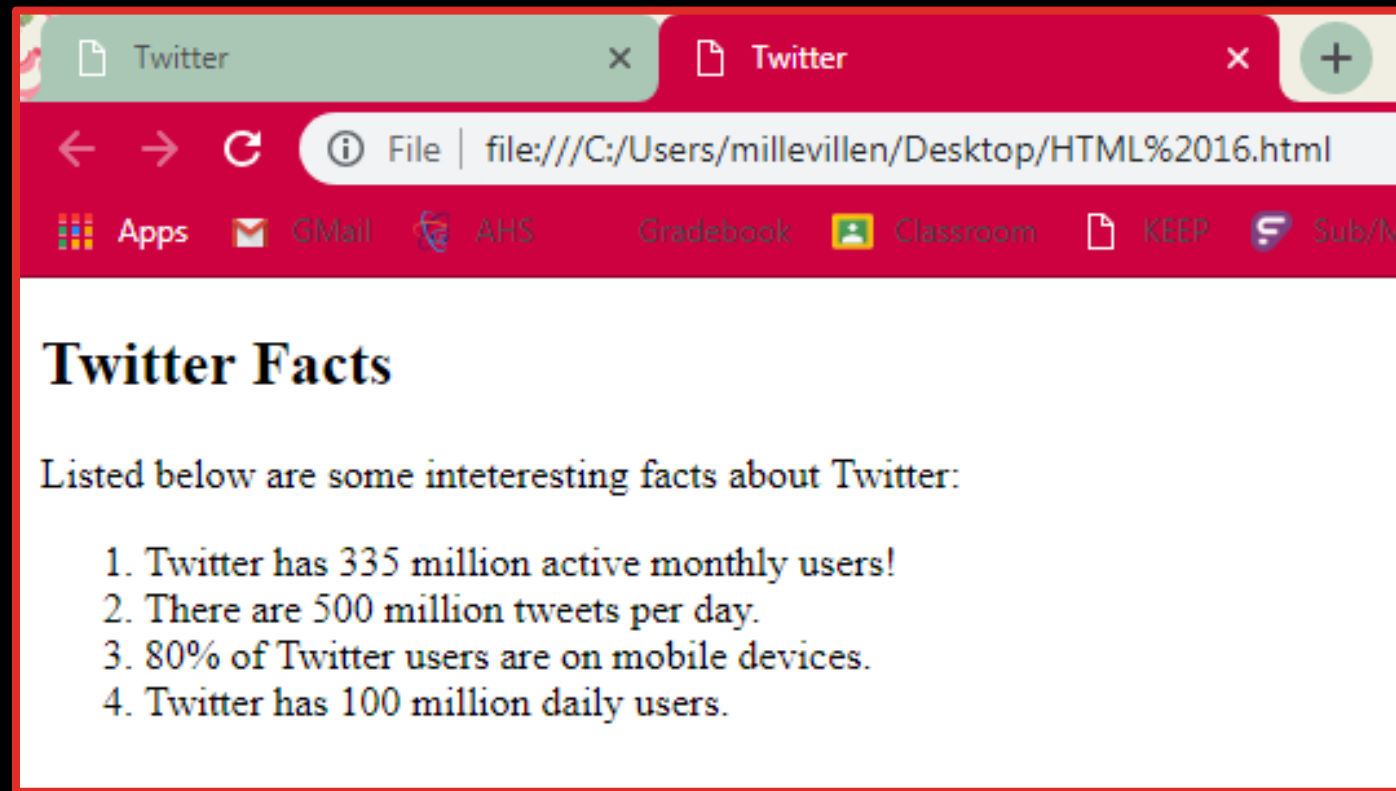

```
h1 {  
    text-align: center;  
}  
  
h2 {  
    text-align: left;  
}  
  
h3 {  
    text-align: right;  
}
```
